

Patients may be switched from 5 mg/day or 10 mg/day oral donepezil directly to the once-weekly ADLARITY by their

ADLARITY with other health insurers and engage in medical education activities.

About Alzheimer's Disease

disease is a progressive and irreversible brain disorder. It involves changes in brain tissue including abnormal buildup of proteins as well as loss of neuron function. The resulting damage leads to the loss of remembering, reasoning, and thinking abilities. The related behavioral changes include the loss of independence in activities of daily living and self-care. Dementia ranges in severity from mild, when it

disease.

Pulmonary conditions: ADLARITY should be prescribed with care to patients with a history of asthma or obstructive pulmonary disease.
